

ABSTRACT OF THE DISCLOSURE

A method and device for implementing a portable guide and guard system is provided. The portable guide and guard device includes a mini-camera, a sound
5 gathering/broadcasting unit and a 3G wireless communicator. The
communicator sends the AV signal to remote service center through an AV
transmitting function of 3G wireless communication system, and the service
personnel in the center answers the user in response to the received live image
and sound so as to assist the user contacted therewith. The service center has
10 functions of videoing, monitoring and emergency assistance. Through the
combination of the abundant database system, network information searching and
various on-line services provided by the service center, the portable guide and
guard device can provide foreign language communication/translation, guiding,
consulting, network information providing, monitoring, videoing, security protecting
15 and emergency assisting for global foreign tourists, blind and dumb people or
security service personnel.
